

ASK EPA!!

Questions and Answers about
Asbestos and EPA's Investigation

Q: How will EPA continue work during the winter?

A: Due to snow and mud, EPA cannot perform outdoor/residential yard cleanups during the winter season. EPA will focus on cleaning properties needing *only* indoor cleanup (e.g. the soil is clean). EPA can remove vermiculite insulation and clean home interiors that have been contaminated.

By cleaning homes with only indoor contamination, EPA will not have to return to those properties to do outdoor cleanups the following summer.
